Let's Start!

We all think differently!

Learning Outcome

Describe routines and regular activities in a wider range of social and work contexts.

Ask your partner:

- How do you make decisions?
- Are you decisive? Intuitive? Practical? Realistic?
- What is the best way to make decisions?

Can Do Statements

- I can talk about personal qualities and family life.
- I can talk about how something happens or how someone behaves.
- I can discuss experiences I've had or haven't had.

Let's Explore!

Sally continues her article about the differences between men and women. Do you think **Men are from Venus, Women are from Mars***?

* This is similar to the title of a popular book about the differences between men and women called *Men Are From Mars, Women Are From Venus*.

Instructions: Read the text aloud.

Are men and women different? When they are born, boys and girls have identical brains. As they grow, the body produces hormones that cause men and women to develop distinctly. These hormones cause different brain development in men and women. As a result, men and women may tend to think differently.

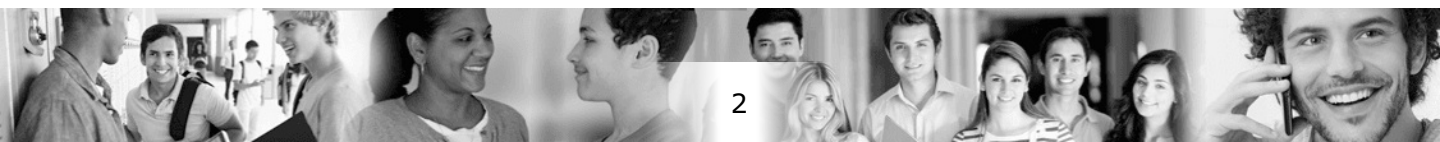

Some believe that the difference between men and women is millions of years old. Could, they wonder, men and women have evolved separately?

Early man provided food for his family. He regularly found his prey in jungles and forests. He threw spears or shot arrows at moving animals. He had to be decisive and realistic.

Early woman guarded her children against danger. She carefully gathered small things like fruit, berries, or mushrooms. She had to know the difference between those that could be eaten and those that were poisonous. She was intuitive and creative.

These early men and women survived because they did these tasks well.

Have modern man and women followed these ancient patterns? Some would agree and many would disagree.

Let's Practice!

Are men and women distinct*? What do you think?

*To be "*distinct*" means to be different. The adverb is distinctly.

Instructions: Read the text again and answer the questions.

1. According to the article, which sentence is true?
 - a) Men and women have identical brains.
 - b) Boys and girls are born with different brains.
 - c) When they are born, the brains of boys and girls are the same.
2. What sentence is a correct explanation for men and women being different?
 - a) The hormones in the body change the way men and women develop.
 - b) Men and women needed to work together to survive.
 - c) Their parents teach them to do different things.
3. Which adjectives are connected with early man?
 - a) Intuitive and creative.
 - b) Decisive and realistic.
 - c) Distinct and identical.

Let's Practice!

How have men and women evolved?

Instructions: Read the article again. Type in the missing adverbs of manner in the paragraph as they are used in the article.

1. The body produces hormones that cause men and women to develop _____.
2. As a result, men and women tend to think _____.
3. Men and women have evolved _____.
4. Men _____ found his prey in jungles and forests.
5. Women _____ gathered small things like fruit, berries, or mushrooms.

Extension Activity

A bibliography is a list of books. Prepare a short bibliography of books about the differences between men and women.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Find the name of the book that is mentioned in this lesson.
- Go online. Find 5 other books in English about the differences between men and women.
- Write the title and the author of each book.
- Read a description of each book.
- Choose 1 book you would like to read.
- Describe the book to your partner.
- Explain why you would like to read that book.

Self-Assessment

Yes **No**

I write a bibliography of 6 books.

☐ ☐

I choose 1 book to read.

☐ ☐

I describe the book.

☐ ☐

I explain why I would like to read that book.

☐ ☐

Target Words

- **identical** (adjective): the same
e.g. When they are born, boys and girls have identical brains.
- **hormone** (noun): a natural product of the body that performs a function
e.g. The body produces hormones that cause men and women to develop distinctly.
- **brain** (noun): The part of the body used for thinking
e.g. These hormones cause different brain development in men and women.
- **to tend to** (verb): to be likely to
e.g. As a result, men and women tend to think differently.
- **decisive** (adjective): able to make decisions quickly
e.g. Early man had to be decisive and realistic.
- **intuitive** (adjective): able to make decisions using feelings
e.g. Early woman was intuitive and creative.

Learning Points

Present Perfect vs. Simple Past Tense

You use the Present Perfect tense to talk about a finished action or event that is connected somehow to the present.

You use the Simple Past tense to talk about a finished action. When you use the Present Perfect there is a connection between what happened in the past and now and you use time markers like *for*, *since* and *ever*.

When you use the Simple Past the action began and finished in the past and you use time markers like *then*, *ago*, *yesterday*, *when I was...*

Adverbs of Manner

Adverbs of manner tell us how something happens.

Examples:

- He regularly found his prey in jungles and forests.
- Have men and women evolved separately.

Many adverbs are formed by adding *-ly* to an adjective:

Examples:

regular ----> *regularly*

You take out the letter *-y* and add *-ily* to adjectives ending in *-y*.

Example:

happy ----> *happily*

The adjectives *fast*, *hard*, *well* and *straight* are exceptions. They do not change when they become adverbs.

Adjective	Adverb
separate	separately
different	differently
distinct	distinctly
careful	carefully
regular	regularly
