Let's Start!

She didn't stop talking all night!

Learning Outcome

Describe routines and regular activities in a wider range of social and work contexts.

Ask your partner:

- Do you talk a lot compared to other people?
- Does it make a difference where you are? Why or why not?

Can Do Statements

- I can talk about behavior and personality.
- I can discuss experiences I've had or haven't had.
- I can compare two things or people and describe the quality of an object or a person.

Let's Explore!

Sally writes a new article about who talks more: women or men? The results may surprise you!

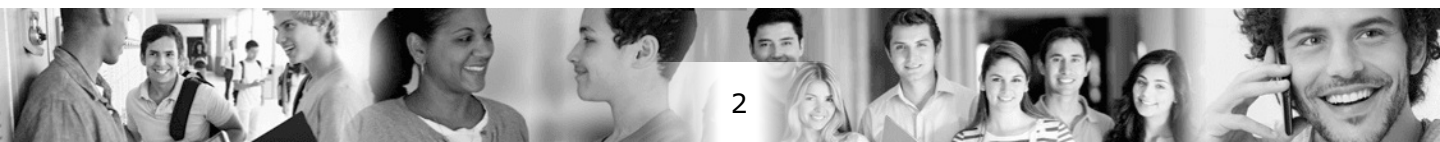

Instructions: Read the text aloud.

Think about a party you attended. Who spoke more, the men or the women? Who talked the most? Who talked the least? Have you been to a party where only the women contributed to the conversation? Maybe you haven't experienced this situation. Many people think that women are more talkative than men. Is this true? The research suggests that women are not always more outgoing.

Some studies have found that women are more talkative than men, but most studies have suggested that men actually talk more than women. How can these differences be explained?

The social setting determines which sex will talk more. In the workplace, men talk more when they are in a high position of authority.

In the classroom, female students spoke less, although this depended on the gender of the teacher. Males were more likely to participate in class discussions if the teacher was a woman, but males and females talked the same amount if the teacher was a man.

Let's Practice!

Do women talk more than* men? What does the research conclude?*

*When the two groups being compared in a sentence are named, you use the word "than" to join them together.

**When research "concludes" something it means it comes to a certain conclusion about a topic.

Instructions: Match column A and column B.

COLUMN A

1. The research suggests that
2. Girls talk less
3. Girls and boys talk the same amount
4. The social setting
5. Men talk more

COLUMN B

- a. in classrooms with female teachers.
- b. determines which sex will talk more.
- c. when in positions of authority.
- d. women are not always more outgoing,
- e. in classrooms with male teachers.

Let's Practice!

Do these differences between the sexes* surprise you?

*The "sex" of a person means if they are male or female.

Instructions: Organize the mystery sentence.

1. Think / party / about / . / up / you / attend
2. this / Maybe / situation / . / you / experienced / haven't
3. men / studies / women / found / that / more / than / are / talkative / have / . / Some
4. Most / that / . / studies / talk / men / actually / suggested / women / have / more / than

Extension Activity

Find reasons that explain the results of the research described in this lesson.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Write down the conclusions of the research on men and women you read in this lesson.
- Explain the conclusions to a partner.
- With your partner, discuss possible explanations for these results.
- For each research conclusion, write down the best explanation you came up with.
- Go online to see if you are correct, or to find the true reason.

Self-Assessment

Yes

No

I write the conclusions of research.

☐ ☐

I explain the research conclusions.

☐ ☐

I discuss possible explanations.

☐ ☐

I find the true explanations.

☐ ☐

Target Words

- suitable** (adjective): good for, appropriate for
e.g. Men's and women's brains have developed in ways suitable to the jobs their ancestors did hundreds of thousands of years ago.
- talkative** (adjective): describes a person who enjoys talking
e.g. Some studies have found that women are more talkative than men.
- suggest** (verb): to argue; to try to prove (in research)
e.g. Most studies have suggested that men actually talk more than women.
- authority** (noun): responsibility for the work of other people
e.g. Men talk more when they are in a high position of authority.
- gender** (noun): sex (male or female)
e.g. Male students spoke more, although this depended on the gender of the teacher.
- social setting** (noun): the context you are in, with other people
e.g. The social setting determines which sex will talk more.

Learning Points

Present Perfect vs. Simple Past Tense

You use the Present Perfect tense to talk about actions you have done at some point in your life that may happen in the future.

You use the Simple Past tense to talk about a finished action or event.

When you use the Present Perfect there is a connection between what happened in the past and now. You use time markers like *for*, *since* and *ever* with the Present Perfect.

When you use the past simple, the time is always past. You use time markers with the past like *then*, *ago*, *yesterday*, *when I was...* with the Simple Past.

To form the Present Perfect tense, you use *have/has* + the past participle of the base form of the verb.

Learning Points

Comparatives and Superlatives

There are different ways to compare by using adjectives. Two of these are comparatives and superlatives.

Some adjectives change to different words in the comparative and superlative form.

With one syllable words, you add **-er** to the adjective to make the comparative form. You add **-est** to the adjective to make the superlative form.

With words of two or more syllables, you add the word *more* before the adjective or adverb in the comparative form. You add *the most* before the adjective or the adverb in the superlative form.

Comparatives: When you compare two things, you use comparatives.

For short adjectives, we add **-er** (*quieter, smarter, bigger*).

For long adjectives, we use the expression **more + adjective** (*more intelligent, more interesting, more difficult*).

If we mention the two items for comparison, we use the expression *than*.

Examples:

*At work, women are **quieter than** men.*

*Women are **more talkative than** men at home.*

Superlatives: You can also use adjectives to compare one item with the rest of a group.

These are called superlative adjectives. For short adjectives, we use the article *the* and add **-est** (*the quietest, the smartest, the biggest*).

For long adjectives, we use the expression **the most + adjective** (*the most intelligent, the most interesting, the most difficult*).

Examples:

She was the smartest student in the group; John was the most modest.

David was the most talkative member of the group.
